

Key benefits

- Hides differences between XPe and WinCE
- Based on low-level APIs for high performance
- Native code based (real-time on WinCE)
- Hides Win32 and GDI API complexity

Key applications

- Multimedia solutions
- Automotive navigation system
- Human machine interface
- Infotainment
- Gaming/POS/Kiosks

Key features

- Design full touch GUIs based on XML
- Animation and video playback
- 2D/3D Effects, Widgets
- Supports multi-language apps
- Ini file loader for app configuration
- Serial Multi-master network eNET
- Runs on ARM and x86 hard platforms
- TCP sockets support, client and server
- Bootloader custom splash screen and update app

SDK

- Develop apps for WinCE from Visual Studio
- Includes many examples
- Extensive documentation

Simplifies and speeds up the embedded software development
